DOCUMENTATION · V1.1.0

CASA Siego®

Rebranding from Synodé to Casa Siego®: identity, every change made to the site, the move from synode.space to casasiego.com, the DNS configuration and the go-live checklist.

Repository: github.com/eliav-mejia/casasiego.com (formerly eliav-mejia/synode.space)

Supersedes v1.0.3 for identity, domain and shared chrome; v1.0.3 remains the reference for the shop, the suit builder, the sign-in gate and the region switch, which work as before under the new name.

17 October 2026

1 · OVERVIEW

Version 1.1.0 renames the house. Synodé becomes **Casa Siego®**, a registered trademark, and the site moves from synode.space to **casasiego.com**. The three brands keep their names (**Fiel**, **Justo**, **Libre**), now signed «by Casa Siego®». The visual system changes with the name: the parchment-and-ink Hellenic manuscript gives way to mostly white pages with vintage beige and wine bands, a two-typeface wordmark, a shared header with an animated mobile sidebar, and softer entrance animations on top of the existing parallax.

AREA	CHANGE	FILES
Name	Synodé → Casa Siego® in every title, heading, footer, sub-brand and SEO tag	all public pages, shop, builder
Wordmark	CASA (Palacio) + Siego (Ledger Regular) + ®	`css/site.css §0, §7`
Palette	White pages, vintage beige and wine bands; legacy token names kept	`css/site.css §1`, `layout.css`, `brand.css`, shop CSS
Chrome	Header, mobile sidebar, section tones, progress line	`js/casa.js` (new), `site.css §8–9`
Motion	Hero wordmark entrance, blur reveals, curtain reveal on photographs	`site.css §6–7`, `js/parallax.js`
Domain	casasiego.com; `CNAME`; canonical, Open Graph, JSON-LD, sitemap, robots	`CNAME`, every `<head>`, `sitemap.xml`, `robots.txt`
Contact	`studio@synode.space` → `info@casasiego.com`	every `mailto:`, shop, builder
Documents	Public prelaunch note; Reino Fiel guide rebuilt; this documentation	`docs/`, `brands/reino_fiel/descargas/`

2 · Identity

WORDMARK

CASA is set in **Palacio**, tracked at 0.2em in capitals; **Siego** in **Ledger Regular**; the ® sits small and high after Siego as the registration mark. Palacio is a licensed font that is not on Google Fonts: the site expects `fonts/Palacio.woff2` (or `.woff`, `.otf`, `.ttf`) and falls back to Cinzel until the files are added. Ledger loads from Google Fonts on every page.

```
<p class="wordmark"><span class="wordmark__casa">CASA</span> <span
class="wordmark__siego">Siego</span><sup class="wordmark__r">&reg;</sup></p>
```

Modifiers: `.wordmark--hero` (home), `.wordmark--colophon` (footers, terms). A ® after the name inside a heading uses `<sup class="reg">` so it does not render full size in Bodoni.

PALETTE

TOKEN	VALUE	ROLE	LEGACY NAME POINTING TO IT
`--thera-white`	#FFFFFF	Page canvas (`--color-bg`)	—
`--beige`	#EEE4D3	Vintage beige bands, sidebar start tone	—
`--beige-soft`	#F7F2EA	Surfaces, light text on wine	`--parchment-marble`
`--wine`	#6B1E2C	Buttons, drop caps, accents	`--amphora-rust`
`--wine-deep`	#4A1621	Hero, club, colophon, sidebar, theme-color	—
`--wine-ink`	#3B1A1F	Body text	`--aegean-ink`
`--brass`	#B0905E	Hairlines and ornaments	`--hellenic-gold`
`--brass-light`	#D6C09A	Gold text on wine and photographs	—
`--taupe`	#6F5E57	Captions, secondary copy	`--laurel-leaf`

Keeping the v1.0 token names means brand pages, the shop and the suit builder pick up the new colours without changes. The shop mirrors the same values in `tienda/js/tailwind.config.js` and `tienda/css/tienda.css`.

3 · Rebranding actions

Everything done for v1.1.0, in the order it was done. Branch `casa-siego`, commit `544f548` and the follow-up commit that adds this document.

#	ACTION	DETAIL
1	Branch	`casa-siego` from `seo-estructura`, kept off `main` until the domain is ready.
2	Name replaced in all text files	Synodé / Synode → Casa Siego; Casa Synodé → Casa Siego; URL-encoded subjects; © lines gain ®. Historical docs `synode-v1.0.x` left as they were.
3	Domain and e-mail	`https://synode.space` → `https://casasiego.com` (canonical, og:url, og:image, JSON-LD, sitemap, robots, `.htaccess`, `.well-known/tdmrep.json`); `studio@synode.space` → `info@casasiego.com`.
4	Image folder	`images/synodos/` → `images/casa/` (git rename; paths, `.gitignore` and scripts updated).
5	Titles and ®	Every `<title>` carries «Casa Siego®»; `og:site_name` and JSON-LD `name` stay plain «Casa Siego» for entity matching; home JSON-LD adds `"alternateName": "Synodé"`.

6	Copy rewritten	«Synodé es la palabra antigua para un encuentro» → «Casa Siego es una casa con tres puertas»; houses heading «Las marcas de Casa Siego®»; Greek Συνέδριον removed (home, sign-in card, 404). Brand mottos in Greek kept.
7	Footers	Wordmark added to every colophon; «© 2026 Casa Siego®. Todos los derechos reservados.» on every page, the shop and the sidebar; type credit «Compuesto en Palacio, Ledger y EB Garamond».
8	Identity CSS	`site.css` 1.1.0: palette, Palacio `@font-face`, wordmark, buttons that fill on hover, blur and curtain reveals; `layout.css` / `brand.css` 1.1.0: wine bands; sign-in card, 404, shop and builder recoloured.
9	Shared chrome	`js/casa.js` on the nine public pages (not the shop or builder, which have their own headers). `parallax.js` 1.1.0 reveals photographs, cards and section heads.
10	Fonts	Ledger added to every Google Fonts link; `fonts/README.md` lists the Palacio file names.
11	Domain file	`CNAME` = `casasiego.com`.
12	Documents	`docs/casa-siego-prelanzamiento.pdf` (public, unlinked); Reino Fiel guide PDF rebuilt; `SEO.md` and `README.md` updated.
13	Repository	Renamed on GitHub to `eliav-mejia/casasiego.com`; local `origin` updated. GitHub redirects the old URL.
14	Script identifiers	`SYNODE_ACCESO` → `CASASIEGO_ACCESO`, `SynodeRegion` → `CasaSiegoRegion`, event `synode:region` → `casasiego:region`, storage key `synode-region` → `casasiego-region` (visitors' saved México / España choice resets once). Internal note renamed `_interno/acceso-casasiego.md`.
15	Local folder	`Meyer/sites/synode.space` → `Meyer/sites/casasiego.com`: **pending**, Windows refused while VS Code had the folder open. Planning documents already use the new path.

4 · Shared chrome: `js/casa.js`

- **Header.** Wordmark on the left, links on the right (Inicio, Fiel, Justo, Libre, Membresía, Contacto). Transparent over a dark hero, frosted white once the page scrolls, hidden while scrolling down and back on the way up. Pages that open on a light section get `.head-offset` so content sits below it. Links are built from the script's own URL, so one file serves every folder depth.
- **Mobile sidebar (≤ 900 px).** Opens as a circle from the menu button. Its background starts at the colour of the section being read and eases into wine; touching or hovering a link tints it to that link's tone. Links slide in one after another; Esc, the scrim or a link closes it; focus moves in and back.
- **Section tones.** As sections cross the middle of the screen the page background eases between white and beige (`--tone` on `body`).
- **Progress line.** A 2 px wine line at the top tracks reading progress.
- **Reduced motion.** All of the above falls back to static states under `prefers-reduced-motion`.

5 · Domain and DNS configuration

DNS is hosted at Namecheap (`dns1.registrar-servers.com`, `dns2.registrar-servers.com`), Advanced DNS tab. GitHub Pages serves the site from the repository through the Actions workflow `.github/workflows/jekyll-gh-pages.yml` on pushes to `main`. Records below were verified on 17 October 2026.

5.1 CASASIEGO.COM

HOST	TYPE	VALUE	STATUS
`@`	A	`185.199.108.153` · `185.199.109.153` · `185.199.110.153` · `185.199.111.153`	In place
`www`	CNAME	`eliav-mejia.github.io.`	In place; 301 to casasiego.com
`@`	AAAA	`2606:50c0:8000::153` · `2606:50c0:8001::153` · `2606:50c0:8002::153` · `2606:50c0:8003::153`	To add (IPv6)
`_github-pages-challenge-eliav-mejia`	TXT	Code from GitHub → Settings (account) → Pages → Add a verified domain	To add
`@`	MX	`eforward1–5.registrar-servers.com` (Namecheap e-mail forwarding)	In place
`@`	TXT	`v=spf1 include:spf.efwd.registrar-servers.com ~all`	In place
`_dmarc`	TXT	`v=DMARC1; p=none; rua=mailto:info@casasiego.com`	Recommended

> **E-mail.** The MX records forward mail; they do not create a mailbox. Create the alias in Namecheap → Domain List → casasiego.com → Redirect Email: `info` → the inbox that should receive it. Until then every contact link on the site bounces. If a real mailbox is chosen later (Google Workspace, Zoho, Namecheap Private Email), replace the MX and SPF records with that provider's.

5.2 GITHUB PAGES SETTINGS

SETTING	VALUE	STATUS
Repository → Settings → Pages → Source	GitHub Actions	**In place**
Custom domain	`casasiego.com`	**In place (eliav-mejia.github.io/casasiego.com redirects to it; certificate valid)**
Enforce HTTPS	On	**To turn on (http:// is not redirected yet)**
Repository website field	`https://casasiego.com`	**Shows http:// today**
`CNAME` file	`casasiego.com`	**On branch casa-siego**

With an Actions deployment the custom domain lives in the Pages settings; the `CNAME` file is kept so the domain is recorded in the repository and survives a switch back to branch deployment.

5.3 SYNODE.SPACE

Urgent synode.space still points at GitHub Pages (same four A records, `www` CNAME), but since the repository's custom domain became casasiego.com no repository claims it: **synode.space and www.synode.space answer GitHub's «Site not found» 404**. Old links, bookmarks and search results are broken until a redirect is in place. GitHub Pages cannot serve two domains from one repository, so the redirect must come from somewhere else:

OPTION	HOW	TRADE-OFF
A · Cloudflare (recommended)	Move synode.space's nameservers to Cloudflare (free); keep a proxied record; add a Redirect Rule: `https://casasiego.com${http.request.uri.path}`, status 301, preserve query string.	True 301 on http and https, per path. Nameserver change takes up to 24 h.
B · Namecheap URL Redirect	Advanced DNS: delete the A and www CNAME records; add URL Redirect Record `@` and `www` → `https://casasiego.com`, Permanent (301).	Simplest. Check that https://synode.space redirects without a certificate warning, and whether paths are preserved.
C · Redirect repository	New repository (e.g. `synode-redirect`) with GitHub Pages, custom domain `synode.space`, and an `index.html` + `404.html` that send every path to the same path on casasiego.com.	Stays on GitHub with HTTPS, but the redirect is a page redirect, not an HTTP 301.

Keep synode.space registered and redirecting for at least a year so search engines and old links follow the move.

5.4 SEARCH CONSOLE

1. Add and verify `casasiego.com` (Domain property, DNS TXT record).

2. Submit `https://casasiego.com/sitemap.xml`.
3. Once synode.space returns 301 (§5.3), open the synode.space property → Settings → **Change of address** → casasiego.com.

6 · Go-live checklist

STEP	STATUS
DNS for casasiego.com (A, www CNAME)	**Done**
GitHub repository renamed; custom domain casasiego.com in Pages; certificate issued	**Done**
Merge `casa-siego` into `main` (casasiego.com still serves the Synodé-named site)	**Pending**
Redirect synode.space → casasiego.com (§5.3)	**Pending · urgent**
Enforce HTTPS; AAAA records; domain verification TXT	**Pending**
Create `info@casasiego.com` forwarding	**Pending**
Add Palacio font files to `fonts/` (check web-embedding licence)	**Pending**
Search Console: verify, sitemap, change of address	**Pending**
Rename local folder to `Meyer/sites/casasiego.com`	**Pending (close VS Code first)**

7 · Production notes

CACHE VERSIONS

site.css 1.1.0 · layout.css 1.1.0 · brand.css 1.1.0 · parallax.js 1.1.0 · casa.js 1.1.0 · a-medida.js 1.1.1 · region.js 1.1.1 · acceso.js 1.0.3 · acceso-config.js 1.0.2 · tienda.jsx 1.1.2 (renamed identifiers); bump the `?v=` query on every page that loads a file you change.

REBUILDING THE PDFS

```
sh docs/src/build-pdf.sh 1.1.0                # this document → docs/casasiego-
v1.1.0.pdf
sh docs/src/build-pdf.sh reino-fiel-sesiones   # Reino Fiel guide (public download)
chrome --headless=new --no-pdf-header-footer --print-to-pdf=docs/casa-siego-
prelanzamiento.pdf \
  docs/src/casa-siego-prelanzamiento.html      # prelaunch note
```

LEFT UNCHANGED ON PURPOSE

- `docs/synode-v1.0.x`: historical documentation under the old name.

- Greek mottos of the brands (Δίκαιος, Ἐλεύθερος…).
- Copyright metadata embedded in the photographs still reads «Synode»; re-export or rewrite EXIF when the photographs are next updated.

CHANGELOG

VERSION	DATE	SUMMARY
1.1.0	17 Oct 2026	Rebranding to Casa Siego®; casasiego.com; new identity, header and mobile sidebar; DNS documentation.
1.0.3	16 Oct 2026	Brand pages, Justo shop and suit builder, sign-in gate, region switch, SEO structure (Synodé).
1.0.2	6 Oct 2026	Image catalogue, upload guide, image protection (Synodé).
1.0.1	6 Oct 2026	First design and CSS documentation (Synodé).
